

ALGORITHM:

- 1.create a dynamic web project
 - 2.create a html files, dashboardervlet,loginervlet and logoutervlet.
 - 3.create a log in page in html file
 - 4.create a loginervlet and check whether valid user name and pasword
 - 5.if valid user exit connect to dashboard
 - 6.else print username or password error
 - 7.dashboard print welcome username and show log out option
 - 8.after creating logoutervlet then, if he/she has been loggedin before then print loggedout sucessfully else print login first.
- sprint planning
- 1st spirnt:
- 1.planning the algorithm
 - 2.tools required
 - 3.concepts used for implementation
- 2nd sprint:
- 1.implementing the code
 - 2.verifying the test cases
